

## CONGRATULATIONS!

You have been accepted in the  
Community tree planting program!

Now that you have a new tree in your yard, here are a few tips to help it survive:

- ✓ During the first year, water your tree **2 to 3 times per week**, until the first leaves fall in the Fall.
- ✓ Continue watering **1 to 2 times per week** for the next three years during its growth period.
- ✓ Maintain a layer of **mulch, about 10 cm** thick, on the surface of the tree pit **annually** to maintain a good humidity level.

For any questions or more information, please contact us at **877.7990**
